

TINT WAI YAN MIN@陈未洋 (ANDREW)

Junior Backend Developer | Java & Python | API Specialists

Phone: +65 9072 9943

Email: tintwaiyanmin.sg@gmail.com

LinkedIn: <https://www.linkedin.com/in/tintwaiyanmin/>

Github: <https://github.com/tintwaiyanmin>

SUMMARY

Results-driven **Backend Software Engineer** with over 3 years of experience specializing in **Java, Spring Boot, and Microservices architecture**. Proven expertise in designing **RESTful APIs**, managing **MySQL/Oracle** databases, and optimizing **ETL pipelines** to improve data reliability by 30%. Recently completed a **Graduate Diploma in System Analysis at NUS**, focusing on scalable enterprise solutions and **Cloud deployment (AWS/Docker)**.

TECHNICAL SKILLS

Languages

Java, Python, JavaScript, Node.js, PHP, Kotlin, SQL

Frameworks & Back-end

Spring Boot, React.js, React TypeScript, RESTful APIs, JWT Authentication

Cloud/ DevOps

Docker, AWS (EC2, S3) , GitHub

Data/ Testing

MySQL , Oracle, Unit Testing (JUnit), API Documentation

TECHNICAL PROJECTS

Shopping Cart Application| Full-Stack JAVA Developer (Spring Boot & React JS)

- **Architecture:** Architected a scalable e-commerce backend using **Spring Boot** and **React JS**, implementing **RESTful API** design patterns to handle high-frequency product catalog requests.
- **Security:** Integrated **Spring Security** with **JWT (JSON Web Tokens)** to manage secure user sessions and stateless authentication for customer accounts.
- **Performance:** Optimized database interaction logic for **CRUD operations**, ensuring sub-second response times for product filtering and checkout workflows.

MovieVerse | Full-Stack Developer (Java & React JS)

- **API Integration:** Integrated high-availability external **Movie Database APIs**, implementing error-handling and data-mapping layers to ensure real-time synchronization of ratings and content.
- **System Design:** Developed the application using **Java** and **ReactJS**, focusing on a modular architecture to allow for rapid scaling of user-review features.

Home Mart | Java and React TypeScript

- **Workflow Optimization:** Conceptualized a localized grocery management system using **React TypeScript**, streamlining digital shopping workflows through optimized state management.
- **Backend Infrastructure:** Built critical backend features including automated **inventory tracking** and a simplified checkout process to reduce user friction during high-traffic periods

HRMS System (Human Resource Management System) | Java and React TypeScript

- **Backend Orchestration:** Engineered a centralized **Java-based backend** that serves as the single source of truth for Web, Android, and iOS mobile applications.
- **Real-time Sync:** Developed synchronized **RESTful APIs** to facilitate real-time updates for payroll, leave tracking, and attendance modules.
- **Data Integrity:** Designed a relational schema in **MySQL** to maintain 100% data accuracy across cross-platform self-service portals for remote employees.

PROFESSIONAL EXPERIENCE

Full Stack Developer | Freelance/ Remote

Sep 2025 - Current

- **Cross-Platform Integration:** Engineered centralized **Java/Spring Boot** backends to synchronize data across **Android (Kotlin)** and **iOS (Swift)** applications, ensuring seamless real-time updates for mobile users.
- **Mobile API Optimization:** Developed and optimized **RESTful APIs** specifically for mobile consumption, reducing payload sizes to improve app performance on low-bandwidth networks.
- **Secure Mobile Auth:** Implemented **JWT-based authentication** and secure **OAuth flows** to protect user data across mobile and web platforms, maintaining **100% data integrity**.

Software Engineer Intern | SSMC

March 2025 - July 2025

- **ETL Optimization:** Re-architected enterprise **ETL pipelines** using modular **Python** and **Shell scripting**, reducing data processing latency by **40%** and improving data ingestion scalability for high-volume logs.
- **System Integration:** Engineered enhanced **RESTful APIs** to bridge **ISMRT and SAP ERP systems**, ensuring 100% data consistency and reducing manual cross-platform synchronization time by 15 hours per week.
- **DevOps & Testing:** Containerized backend services using **Docker** to ensure environment parity across Dev/UAT/Prod, while implementing automated unit testing that identified **10** critical bottlenecks prior to deployment.

Full Stack Developer | Scala Communication

January 2020 - December 2023

- **Performance Engineering:** Optimized backend logic for 4+ production **Java-based microservices**, resulting in a **10% increase** in overall system performance and reduced API response times.
- **Automation:** Developed and maintained automated monitoring scripts in **Java**, improving data reliability by **30%** and enabling real-time error reporting for immediate stakeholder intervention.
- **Security & Migration:** Led the migration of legacy **PHP/Node.js modules** to **Spring Boot**, while architecting secure **JWT (JSON Web Tokens)** authentication layers to protect sensitive user data across high-traffic endpoints.
- **Database Tuning:** Refactored complex **SQL queries** and implemented advanced indexing strategies in **MySQL/Oracle**, reducing database load and improving query execution speed by **25%**.

EDUCATION

National University of Singapore (NUS)

Aug 2024 - Feb 2025

Graduate Diploma in System Analysis

Bachelor of Arts (English)

Sep 2014 – Dec 2018

Yadanabon University

ADDITIONAL INFORMATION

- **Languages**
 - **Burmese** - Native
 - **English** - Fluent
 - **Mandarin** - Intermediate
 - **Japanese** - Intermediate
- **Certificates**
 - Web Application Development
 - Andriod Application Development
 - Agile Software Delivery
 - Machine Learning Certificate
 - Amazon DevOps Certificate
